Personal Statement

I have a strong passion for all areas of design. I enjoy regularly working on all aspects of the design process, from idea generation through to artworking and implementation.

Each brief is a new and exciting challenge for me, with unique problems that demand specific solutions. This allows me to apply the same level of thought and creativity, regardless of the scale of the task, and approach each new problem with an open mind.

Working within a group is something I have a lot of experience of and enjoy very much. I welcome the challenges that come with communication and compromise.

My ambitious nature has given me an eagerness for knowledge to help improve my design and technical skills.

Experience

VINCI PLC | Graphic Designer | 2002 to 2008

I have gained a vast amount of experience in my six years working as part of the design team at VINCI PLC, on a variety of projects for a large number of national group companies.

As part of my role within the team, I was responsible for producing all aspects of printed literature, company websites, interactive flash presentations, signage and exhibition materials whilst maintaining the corporate branding.

Marconni Communications | Work Placement | August 1998

Whilst on summer placement i worked alongside the company's in-house design team on the re-branding of the company.

Interests

Aside from design, I have a passion for music, film, reading and cooking. I am an ardent supporter of my local rugby league side, and attend matches when I can. In addition to this, when not investigating new software and design processes, i like to blow the cob webs away Skiing and Biking.
